#### **DETAILED ACTION**

This Office Action resets the period of reply to the mailing date of this Office Action. 1.

# Response to Arguments

Applicant's arguments with respect to claims 5-9 have been considered but are moot in 2. view of the new ground(s) of rejection.

### Claim Objections

Claim 9 is objected to because of the following informalities: The word "swatches" is 3. suggested to be changed to "switches". Appropriate correction is required.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the 4. basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this Application/Control Number: 09/862,384

Art Unit: 2611

subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 5 and 6 rejected under 35 U.S.C. 102(e) as being anticipated by Grung et al. (U. S. Patent No. 6, 650, 720).

Regarding claim 5, Grung et al. discloses a phase detector (Fig. 3, block 204), comprising:

a sampling clock generator (Fig. 3, block 204, column 3, lines 55-58) which generates a clock at an oversampling rate compared to a data rate of an input sequence;

a first sampler (Fig. 3, block 204, column 3, lines 58-65) which samples data values (middle samples) of the input sequence;

a second sampler (Fig. 3, block 204, column 3, lines 58-65) which samples edges (edge samples) between the data values; and

a data phase detector (Fig. 3, block 204, column 3, line 58-column 4, lines 8) which determines phase error between data transitions in the input sequence and the sampling clock phases, based on amplitudes (magnitudes) of the sampled edges, the determined phase error being fed into the sampling clock generator to adjust the phase of the sampling clock, wherein the VCO (Fig. 3, block 212) adjusts the phase of the sampling clock (column 3, lines 35-42).

Regarding claim 6, which inherits the limitations of claim 5, Grung et al. discloses the phase error is proportional to an amplitude (magnitude) of a sampled edge (column 3, line 66-column 4, line 8).

Art Unit: 2611

# Allowable Subject Matter

6. Claims 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### **Conclusion**

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Curtis B. Odom whose telephone number is 571-272-3046. The examiner can normally be reached on Monday- Friday, 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on 571-272-3021. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
